

MW40

Moveable sliding glazed windbreak, which employs a horizontal counterweight for smooth motion and easy use. It's most distinguishing characteristic is its very thin profiles - 40x80mm.

The construction can be modified to fit any opening dimension, with a maximum height at 2,20m, while for greater heights a fixed glass is placed on the upper end of the opening. It's designed to fit in 8-10mm glassboards. Easy and quick installation.

MW40-FP

In an attempt to make the moveable windbreak system easier to integrate with the surroundings, the product is also available with the addition of a large pot or seating. The MW40-FP can therefore be installed directly on the perimeter of shop fronts and patios, without requiring anchoring on the floor.
